

CFIT and Overreliance on Automation

The General Aviation Steering Committee (GAJSC) study of controlled flight into terrain (CFIT) accidents in general aviation revealed overreliance on automation as a precursor to some mishap events. It was found that automation use contributed to VMC and IMC accidents in day and night flight conditions. Awareness of the limitations of automation and pilot proficiency in flying with and without automation are key to safe flight operations for all pilots.

Directions: The event will be held in the Terminal Building. Those driving in please park in the west lot. Those flying in use the ramp east of the Terminal Building.
